Executive Overview

The company currently employs 1,470 people, with 237 departures and an attrition rate of 16.1%. That is higher than what’s typically seen in the customer experience industry and points to underlying issues worth addressing.

1. Compensation is a critical factor.

There is a significant gap in pay between those who leave and those who stay. The median monthly income for leavers is about 3,200, compared to 5,200 for those who remain, creating a 38% difference. This strongly suggests that many employees feel underpaid or see better opportunities elsewhere.

Demographics

Gender

As argued earlier, women continue to represent a larger share of attrition at 63%, compared to 37% for men. This confirms a consistent pattern seen on the overview page and suggests that retention challenges among female employees are not isolated incidents. It points to a deeper structural issue that might be tied to flexibility, work-life balance, promotion opportunities, or the support they receive from the organization.

Age

Survey Scores

Looking at the employee satisfaction data, the overall picture is positive. Most people rate their experience as High or Very High across all five areas: environment, job involvement, job satisfaction, relationship satisfaction, and work-life balance. That means a strong majority feel engaged and supported in their roles.

However, there’s still a noticeable group of employees reporting Low satisfaction in three key areas: Environment Satisfaction, Job Satisfaction, and Relationship Satisfaction. These numbers are not small, which means there are

Income & Outliers

Pay gap

Leavers sit at a median of 3.20K while stayers are at 5.20K, a 38.47% gap. That is large enough to pull people to the market, especially in roles that are easy to hire away.

Role and department patterns

In the “Avg Monthly Income and Attrition Rate by Department and Job Role” chart, attrition spikes in several roles even when pay is not the lowest. Sales roles show the steepest attrition line on the right side of the chart. R&D has

Workforce

Looking at the workforce patterns, several important trends stand out that help explain why people are leaving and where we should focus our efforts.

Distance from Home

Employees who live closer to the workplace show the highest attrition numbers. At first, this might seem counterintuitive, but it often happens when people feel they have many nearby job options. It could also reflect a lack of strong attachment to the company if they view employment as convenient rather than strategic. On the other hand, employees who live farther away seem more likely to stay, possibly because switching jobs would require a bigger lifestyle change. However, simply, there might not be a relationship between these two variables/factors.
